

adjustablility....adjustability....adjustablility

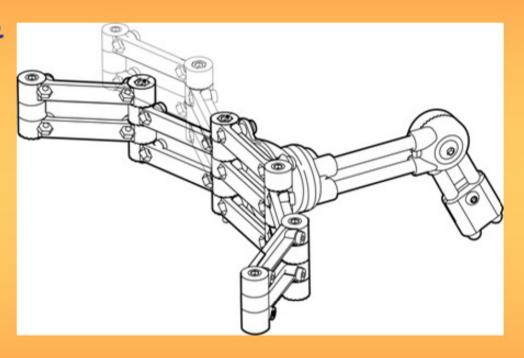

- The need for a Head Rest & its position/orientation is determined after the rest of the body has been aligned & supported adequately
- The role of the Head Rest will depend on the postural & functional needs of the individual

- COMFORT:
 - maintaining an upright posture over time expends energy
- FUNCTION: keeping the head in an optimum position for visual, auditory stimulation
- SAFTEY: ensuring head support during

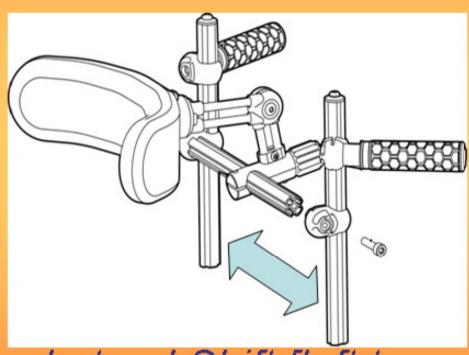

- "The Headrest should be multi-adjustable, as the correct position requires fine tuning." [P. Pope, 2007]
- "The disadvantages
 of a multi-adjustable
 head support is the
 ease with which it can
 be altered
 inadvisably" [P. Pope, 2007]

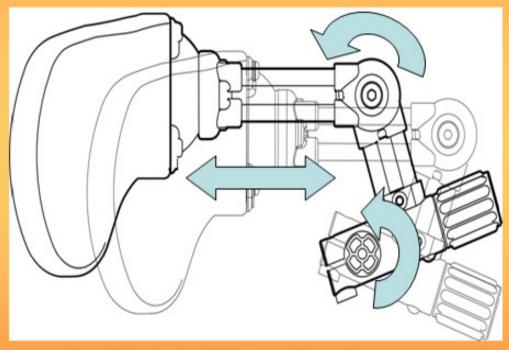

- The beauty of the CHUNC Headrest range:
- Positioned to the needs of the individual
- Easy multi-adjustable fine tuning & setting by therapist
- Easy to remove/refit by carers without

Headrest Ranges of Adjustment

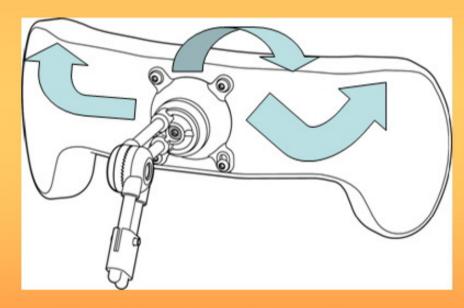

Lateral Shift [left to right]

 Anterior/Posterior Adjustment [Depth]

Headrest Ranges of Adjustment

 Vertical/Lateral [Rotation]

 Increase/Decrease Curvature [Contouring]

Ranges of Adjustment

- Changes in function can require changes in posture
- Upright & active reduces the load of head on Headrest
- Lean back and relax increases the support
- Tilt-in-Space enables the user to have a varying degree of support from the
