

REGISTRATION

RAatE 2013 is the only UK conference focused on the latest innovations and developments in Assistive Technology and will be of interest to everyone who uses, works with, develops or conducts research on AT.

Run in association with the Health Design & Technology Institute (HDTI) at Coventry University, RAatE looks to provide news and updates on new technological developments, service innovations, research and development and a wide range of other stimulating topics.

RAatE 2013 is delighted to announce this year's keynote speaker, Annalu Waller, Professor of Human Communication Technologies in the School of Computing at the University of Dundee, UK. Having worked in the field of Augmentative and Alternate Communication (AAC) since 1985, designing communication systems for and with non-speaking individuals, Annalu established the first AAC assessment and training centre in South Africa in 1987. Her primary research areas are human computer interaction, natural language processing, personal narrative and assistive technology. In particular, she focuses on empowering end users, including disabled adults and children, by involving them in the design and use of technology.

Known as a friendly and productive conference, RAatE offers you a chance to meet and share knowledge and experience with other people working in AT. Paper presentations and workshops at RAatE 2013 will include:

- Recreation
- Use of mainstream technology
- Factors impacting on AT control and use
- How to incorporate evidence based practice

To book your place at RAatE 2013 register online at www.raate.org.uk
